

Skills assessment - Front end developer

This assignment aims to assess your skills as a front end developer. When you are done the code should be made available to us on GitHub. The repository should contain a ReadMe that explains how to start up the app so we can easily run it.

The web app

You should build a web app using The Movie DBs API (<https://developers.themoviedb.org/3/getting-started>) as the data source. You can use this API key: 9618628fa1ffaa6ea5cbdc6f8f5a44d3.

The app should have the following functionality.

- A search field.
- A list of search results. Sorted by relevance.
- A detail view of a movie including a list of actors. Actors should be linked to a detail view for actors.
- A detail view for an actor, including that actors top 10 popular movies.
- It should be responsive and look good on, at least, desktop, tablet portrait and mobile portrait.
- It should support the latest versions of IE, Chrome, Safari and Firefox.
- JS and CSS should be minified.

Make it pretty

You might not be a designer or UX developer but try to make it good looking.

Tooling

You should use frameworks of your choice.

We want you to use a linter, do styling with SASS/Less and write unit tests for your code.
Your tests should run as soon as you change a relevant file.

Good luck!

/Your friends at Iteam
